bhoksi

Ambulance

Print it

1. Print every page at 100% / "Actual size" (no "fit to page"). 24 pages on A4.
2. Check the 50 mm square measures exactly 50 mm.
3. Tape the pages together using the corner marks (page order is printed on each page).

Build it

1. Fold the chassis and glue the axle liner inside it. Push a straw bushing into each axle hole, then slide the axles through and press the wheels on.
2. Fold the patient box: walls up, glue the tabs to the front end, and glue the cabinet rib to the floor just behind the front wall, then close the roof. Fold the sill and header hems inside the open back.
3. Fold each back door's hem over and glue it flat, then crease the door hinges back and forth a few times so they swing easily.
4. Fold the cab: sides up, then wrap the grille, bonnet, windscreen and roof round and glue the tabs.
5. Glue the cab and the patient box onto the chassis. Fold the stretcher tray and slide it in through the back doors.
