bhoksi

Bakkie & Trailer

Print it

1. Print every page at 100% / "Actual size" (no "fit to page"). 5 pages on A3.
2. Check the 50 mm square measures exactly 50 mm.
3. Tape the pages together using the corner marks (page order is printed on each page).

Build it

1. Press out every piece and crease the folds. The chassis, bin, tow bar and trailer parts are the thick double-wall board.
2. Fold the chassis box and glue its tabs. Glue a straw bushing through each pair of axle holes, then slide in the axles and press on the wheels.
3. Fold the double cab: sides up, wrap the grille, bonnet, windscreen and roof round and glue the tabs. Glue the bulkhead inside first.
4. Fold the load bin but don't glue the tailgate: it drops down on its crease. Glue the bin and the cab onto the chassis.
5. Glue the sports bar's legs flat inside the bin walls behind the cab, the mirrors beside the windscreen and the tow bar across the back of the chassis.
6. Fold the trailer tray, axle box, tongue and jockey stand. Glue the axle box and tongue under the tray and fit the trailer axle and wheels.
7. Rest the tongue eye on the tow bar and drop the hitch pin through both. Hook up and go!
