Rubber-Band Racers (Twin Pack)

Print it

1. Print every page at 100% / "Actual size" (no "fit to page"). 4 pages on A3.
2. Check the 50 mm square measures exactly 50 mm.
3. Tape the pages together using the corner marks (page order is printed on each page).

Build it

1. Press out both chassis trays. Fold up the rails and glue the corner tabs, then fold each hem strip down inside its rail and glue it flat: the holes line up.
2. Glue a straw bushing through each pair of axle holes and trim it flush. Push an anchor pin through the small holes near the nose and glue it.
3. Slide the rear axle through its straw, threading the notched hook onto it in the middle, glue the hook, then press the big wheels on. Fit the front axle and small wheels.
4. Fold each body: sides up, wrap the nose, windscreen, cockpit and engine cover round and glue the tabs. Glue it on the chassis.
5. Fold the wing (pad, strut, wing) and glue the pad on the engine cover.
6. Through the floor window, loop a band over the anchor pin and its other end onto the axle hook.
7. Roll the racer backwards to wind the band round the axle, put it on the start line and let go. Race!
