bhoksi

Garage & Car Wash

Print it

1. Print every page at 100% / "Actual size" (no "fit to page"). 36 pages on A4.
2. Check the 50 mm square measures exactly 50 mm.
3. Tape the pages together using the corner marks (page order is printed on each page).

Build it

1. Fold the base: skirts down, feet folded in. Flutes run across the short side. Fold up the workshop walls on their floor, glue the office partition across the middle, then glue the workshop to the base.
2. Glue the level-2 deck on the walls and partition, then the three 2-ply guard rails. Fold the ramp's kerbs up and over, glue its foot to the base and its top flap to the deck, and stand the pier under it.
3. Lift: fold the hems inside the tower, glue it down, push straw bushings through both walls and slide the skewer and drum straw through. Push a bottle cap on the front end and glue in a skewer stub as the handle. Tie both strings to the platform and wind them on the drum.
4. Car wash: fold the hems, glue the tunnel down, wrap the fringed brush strips round three straws and slide them onto skewers through the roof and wall holes. Bottle caps go on as pulleys: a crossed band joins the two side brushes, a quarter-twist band runs to the top brush.
5. Fold the pumps, island, columns and canopy and glue them on, then lock the base to your road tiles with butterfly keys.
