bhoksi

RC Truck Lite

Print it

1. Print every page at 100% / "Actual size" (no "fit to page"). 20 pages on A4.
2. Check the 50 mm square measures exactly 50 mm.
3. Tape the pages together using the corner marks (page order is printed on each page).

Build it

1. Fold the cab: sides up, then wrap the grille, bonnet, windscreen and roof round and glue the tabs.
2. Fold the chassis box and glue a straw bushing through each pair of axle holes. Glue the fifth-wheel plate on behind the cab.
3. Glue on the fuel tanks, mudguards, mirrors and the straw exhaust, then slide in the axles and press the wheels on.
4. Fold the trailer deck and its axle box, glue the box and the two landing legs underneath and fit the trailer wheels.
5. Glue the mud flaps and the striped under-run bar under the tail.
6. Glue the king pin up into the hole under the trailer nose, then drop it into the fifth wheel: coupled!
7. Clip the Brain onto the trailer and plug in the drive and steering pods.
